

MySQL DBA/Developer

Company Background

I-Behavior Inc., a fast paced, growing database marketing services company with offices located in Harrison, NY and Louisville, CO has a great opportunity for a MySQL Database Administrator/Developer in our Colorado office. (www.i-behavior.com)

Position

This position is responsible for the development, administration, deployment, and maintenance of both development and production MySQL database systems.

Responsibilities

- Contribute to a distributed MySQL server architecture and design project
- Perform MySQL database administration tasks in a Linux environment, including maintenance, troubleshooting, tuning, optimization, installation, upgrades, backup/recovery, and data migration.
- Architect, design, develop, analyze, extract, load, and maintain MySQL databases using SQL, stored procedures, and Unix shell scripts
- Work closely with software development to design and implement optimal solutions
- Maintain database design documentation.
- Develop and maintain supporting documentation for capacity planning.
- Consistently meet deadlines and schedules by working closely with the production team.

Qualifications

- Bachelor's degree in computer science or related IT field preferred
- 4+ years experience designing and administering MySQL databases
- Exceptional MySQL production database administration and tuning skills
- Unix shell scripting
- Proactive mindset with a genuine passion for creating, implementing and tailoring software
- A high level of enthusiasm for working in an entrepreneurial environment
- Excellent communication skills (verbal, written, listening)

Desired Experience:

- Oracle administration and development experience
- Data modeling and design
- Microsoft SQL Server, T-SQL, and Reporting Services
